

ABSTRACT

The present invention provides an adhesive film obtainable by irradiating electron beam on a molded article obtainable by molding a resin composition comprising components (A) and (B), the storage method of the film and a laminate comprising the adhesive film and an adherent. Component (A) is an epoxy group-containing copolymer obtainable by polymerizing, wherein (a₁) is ethylene and/or propylene, and (a₂) is a monomer represented by formula (1):

(wherein R represents a hydrocarbon group of a carbon number of 2 to 18 having a double bond, wherein at least one of hydrogen atoms of the hydrocarbon group may be substituted with a halogen atom, a hydroxyl group or a carboxyl group, and X represents a single bond or a carbonyl group). Component (B) is a copolymer obtainable by polymerizing (b₁) and (b₂), wherein (b₁) is ethylene and/or propylene, and (b₂) is α, β-unsaturated carboxylic acid anhydride.
